Conclusion

Chapter 4: Implementation and Testing

Introduction

4.1 Sprint 1 (Example: Registration and Authentication)

- Sprint Objective
- Sprint Product Backlog
- Detailed Functional Specification
- Developed Interfaces

4.2 Sprint 2

4.3 Sprint 3

4.4 Sprint 4

Conclusion

Conclusion and Perspectives

General Introduction

Draft:

Based on the percentage growth in road safety (**7.6% worldwide +source**), we want to increase this growth in Tunisia, because this area deserves attention. To achieve this, we need to focus on innovation and renewal by improving online solutions instead of face-to-face approaches. Online platforms are more effective, cost-efficient and offer numerous advantages. In addition, **incorporating statistics** on how professionals use online spaces to expand their networks, share opportunities and collaborate would further support this change.

Yossra note: and talk about how vast this sector of road safety is (education health tech laws ect..)

Chapter 1 : Preliminary study

1. Presentation of the host organization

The National Observatory for Road Safety (ONSR) is a Tunisian institution dedicated to improving road safety and reducing road accidents. Its main task is to analyze accident statistics, develop prevention strategies and work with various stakeholders to implement effective solutions.

The ONSR works closely with ministries, law enforcement agencies, local authorities and research institutions to improve road safety throughout Tunisia. By collecting and analyzing data, it identifies risk factors, recommends safety measures and conducts awareness campaigns to promote safer road behavior.

2. Presentation of the project

Summary of the project

Discussions with the ONSR revealed that cooperation with the private sector is limited. This prompted us to develop a solution that integrates startups into the road safety ecosystem and provides them with a platform to propose innovative solutions.

The platform consists of two key components:

Project Submission Area – An area where startups can pitch ideas that contribute to improving road safety.

Challenge Area – An area where startups can propose solutions to specific road safety problems identified by the authorities.

After we presented this concept, the ONSR expressed great interest and included the idea in their proposals for **Vision 2035**, which were submitted to the **Ministry of Economy and Planning**.

Objective of the project

- To bridge the gap between start-ups and public institutions to promote innovation in the field of road safety.
- Support national initiatives and long-term strategies to improve road safety.
- Promote transparency and fairness in the selection and evaluation process.
- Reduce bureaucratic delays to accelerate the implementation of innovative solutions.
- Ensure equal opportunities for small startups by making the process more accessible.
- Create a competitive yet supportive market that encourages both innovation and collaboration.

2. Benchmarking Study

TUNEPS (Tunisia Online E-Procurement System):

Presentation:

TUNEPS is Tunisia's officially recognized electronic procurement platform that aims to digitize public procurement and make it more efficient. Its aim is to improve transparency, efficiency and competition in public procurement and to enable companies to participate electronically in government tenders. This platform is managed by the Haute Instance de la Commande Publique (HAICOP) and is mandatory for certain volumes of public contracts.

TUNEPS was selected for the benchmarking study as it plays an important role in procurement and contracting in the Tunisian public sector.

URL: <https://www.tuneps.tn>

Devices/Platform:

Web-based platform

Social media presence:

TUNEPS has minimal direct social media presence as it mainly functions as an administrative platform. However, HAICOP provides announcements and updates via:

- Facebook (10K followers, via HAICOP)
- LinkedIn (7K followers, via HAICOP)
- Twitter (X) (Limited engagement, via HAICOP)

Target Audience:

Government entities and procurement officials

Private companies bidding for government contracts

Regulatory and auditing authorities

Graphical Analysis:

Logo:

The TUNEPS logo is a simple, text-based design that includes the name "TUNEPS" in all caps and a sans serif font. Next to the wordmark is the symbol of the letter "O" from the HAICOP logo. The color scheme consists of black for the text and red for the wordmark, as well as red for "Tunisia". The design is in line with the government's brand standards and conveys authority, visibility and national identity.

Name signification:

"TUNEPS" stands for Tunisia Online E-Procurement System and directly describes its function as a digital procurement platform for public tenders in Tunisia.

Functional Study:

- Search for tenders: Users (suppliers) can search for available public tenders by category, sector, or institution.
- Companies must register on the platform, submit required legal documents, and obtain an electronic certificate to participate in tenders.
- Government entities post procurement notices, allowing businesses to view detailed requirements, deadlines, and evaluation criteria.
- Registered suppliers submit proposals electronically, ensuring a secure, traceable, and paperless bidding process.
- The platform provides reports on procurement activities, helping regulatory bodies ensure compliance with public procurement laws.

Tenders Direct:

Presentation:

Tenders Direct is the UK's most accurate tender alert service, providing suppliers with access to public sector contracts from across the UK, Ireland and OJEU. Since its inception in 1993, the company has grown into a team of over 50 experts helping businesses find and win public sector contracts.

The platform offers personalized tender alerts, bid management tools and training services to help businesses navigate the public procurement process.

URL: <https://www.tendersdirect.co.uk>

Devices/Platform:

Web-based platform accessible via desktop and mobile browsers

Social Media Presence:

- YouTube (247 subscribers)
- Facebook (3.7K followers)
- LinkedIn (4K followers)

Graphical Analysis:

The logo:

The Tenders Direct logo features a modern design with the name "Proactis" in dark blue and "Tenders Direct" in orange, using a clear, sans serif font separated by a line. The logo features a distinctive swirl symbol as the dot of the "i" in "Proactis", representing connectivity and the ever-evolving, dynamic flow of ideas. The color scheme uses predominantly orange and dark blue hues that express professionalism, trust, reliability and dynamism.

Name signification:

"Tenders Direct" stands for the core function of the platform, namely direct access to tender opportunities, and emphasizes the simplicity and efficiency of connecting suppliers to public contracts.

Functional Study:

- Subscribers receive customized email notifications for low and high-value tenders from the UK, Ireland, and OJEU, ensuring they never miss relevant opportunities.
- Users can opt to receive notifications 3 to 18 months before contract renewals, giving them a competitive edge in preparation.
- The platform offers full access to every contract notice, prior information notice, and contract award, with a database encompassing over five years of data.
- Tenders Direct provides tools and services to assist businesses in managing their bids effectively, including bid writing training and tendering

Flat6Lab:

Flat6Labs is one of the best startup accelerators in the MENA region (Tunisia, Egypt, the United Arab Emirates (UAE), Saudi Arabia, Bahrain, Lebanon and Jordan) as it provides funding, mentorship and networking opportunities to entrepreneurs. We selected it as one of our benchmarking studies due to its impact on the startup ecosystem, particularly in Tunisia.

URL: <https://www.flat6labs.com>

Devices/Platform:

Web-based platform accessible via desktop and mobile browsers

Social Media Presence:

Facebook(44K), X(23K), Instagram(10K), Youtube(2.85K), LinkedIn(120K)

Audience: entrepreneurs and startups, investors and venture capitalists, corporate and government partners, mentors and industry experts, ecosystem enablers.

Graphical Analysis:

The logo:

The logo is an abstract logo composed of the word "Flat6Lab" in uppercase using a sans-serif font. Alongside the wordmark, along with an illustration featuring the initials F6L stylized in the shape of a part of an Arabic ornament, symbolizing the regions where Flat6Labs operates. This illustration is enclosed within a yellow square, creating a modern and culturally relevant design that represents both innovation and the MENA region.

Name signification:

"Flat6Labs" combines "Flat6", refers to a high-performance six-cylinder engine, symbolizing speed, efficiency, and power, and "Labs", representing an innovation hub. Together, it reflects a fast-moving platform that accelerates startup growth.

Functional Study:

- Startup application: Entrepreneurs apply via the platform, choosing the appropriate funding program and submitting details of their startup.
- Funding process : Selected startups receive seed funding in exchange for equity, with the possibility of follow-on funding if the startup succeeds. Agreements are managed offline, through direct interactions.

- Mentoring : Startups participate in a structured acceleration program offering mentoring from industry experts. Mentoring is provided in person and through online sessions, not through the platform.
- Investor Connections: Startups showcase their progress at Demo Days, connecting with potential investors. These events take place offline, facilitating face-to-face networking.

Financini:

Financini is a Tunisian online platform that connects entrepreneurs with financing opportunities and provides a database of financing mechanisms and support programs for SMEs. Launched by CONECT in collaboration with the Anima investment network, Financini aims to facilitate entrepreneurship and investment in Tunisia, Senegal and Morocco. We choose it as one of our benchmarking studies because it is a structured platform that connects entrepreneurs with funding opportunities, which is one of our main objectives.

URL: <https://financini.org.tn/>

Devices/Platform:

Web-based platform accessible via desktop and mobile browsers.

Social Media Presence:

They don't own any social media.

Audience: Entrepreneurs, startups, investors, and organizations offering financial support.

Graphical Analysis:

The logo:

The logo is a logotype of the word "Financini" that features a bold, sans-serif typeface with sharp edges, giving it a casual, playful feel. The gradient effect used in the logo incorporates shades of blue and orange, adding vibrancy but also making the design appear more energetic and youthful. Although modern, the overall aesthetic doesn't quite match the professional, trustworthy image usually associated with a platform focused on funding and supporting entrepreneurs. The logo seems less suited to a serious financial service than to a technological product or a fun game.

Name signification:

"Financini" combines the word 'finance' with the suffix '-ini', creating a personal and direct appeal, essentially 'finance me'. It positions the platform as one focused on providing tailored financial support to entrepreneurs and startups.

Functional Study:

- **Search for funding:** Users search for financing opportunities by selecting the stage of their business (idea, launch, development or growth) and their sector of activity (which is limited sectors). The platform then provides a list of potential investors and their contact details.

- Application process: No real application process, just a search tool that provides the investor's contact details. So there is no structured way to submit projects or track funding progress.
- Matching investors and partners: Matching is basic and limited, users get investor contacts but there is no real interaction system (like chats or proposal submission). And the number of investors available seems low, which reduces its effectiveness.
- Support and resources: Creating an account in the platform makes users can connect with experts in the entrepreneurial ecosystem. However, there is no structured mentoring or business development tools, only access to expert advice.
- User experience and accessibility: There is a lot of issues in the interface like broken buttons, login problems and unintuitive experience.
